TECHNICAL SKILLS

PROGRAMMING LANGUAGES:

- C, C++
- Java
- Python
- QML
- HTML, JavaScript

TOOLS:

- Qt Creator
- Android Studio
- Visual Studio
- Git

GUI & FRAMEWORKS:

- Qt Framework
- Qt Quick (QML)
- Android SDK

► PROFILE SUMMARY

Software Engineer with nearly 2 years of experience in Software-Defined Vehicle (SDV) and automotive embedded UI development. Hands-on expertise in C++, QML, Android, and Python, with proven experience building digital cluster interfaces, real-time embedded dashboards, and AI/ML-based ADAS Android applications. Strong at integrating QML UI layers with C++ backend services, optimizing real-time performance, and delivering stable, production-ready automotive software that meets reliability and responsiveness requirements.

► WORK EXPERIENCE

Software Engineer

People Tech | Hyderabad, India | 2024 - Present

EBIKE APPLICATION DEVELOPER

- Developed embedded user interface applications for E-Bike systems using C++ and QML to support real-time vehicle operation.
- Designed and implemented digital dashboard interfaces to display live vehicle data including speed, battery status, trip information, and system alerts.
- Built and maintained C++ backend modules to process dynamic vehicle data and ensure smooth, real-time UI updates.
- Integrated QML-based UI components with backend services to deliver responsive and high-performance user interfaces.
- Performed debugging, functional testing, and continuous enhancements to improve application stability and user experience.
- Collaborated with cross-functional teams to understand system requirements and deliver production-ready features.
- Delivered regular software updates, improving overall system stability, performance, and maintainability.

SDV – SOFTWARE DEFINED VEHICLE

- Developed cluster side screen user interfaces using QML with C++ backend integration.
- Designed and implemented digital cluster layouts to display real-time system data and alerts.
- Built C++ backend logic and integrated it with the UI through QML-C++ bindings.
- Ensured smooth real-time updates and optimized UI performance for stability.
- Implemented signal-slot mechanisms and data bindings for efficient UI-backend communication.
- Conducted debugging and functional testing to improve reliability and system behavior.
- Collaborated with cross-functional teams to deliver production-ready cluster features.

ANDROID APPLICATION DEVELOPER – ADAS

- Developed Android applications for AI/ML-based ADAS use cases in automotive environments.
- Integrated Python-based inference models into Android applications to enable intelligent driver safety features.
- Designed and implemented real-time video capture and processing pipelines for on-device inference.
- Built efficient communication between Android components and backend inference engines to deliver instant detection feedback.
- Optimized inference performance on mobile hardware to reduce latency and ensure smooth real-time operation.
- Performed debugging, profiling, and device-level testing to ensure application stability and reliability.
- Collaborated with cross-functional teams to translate ADAS requirements into production-ready mobile features.

EDUCATION

Bachelor of Technology (BTech)
MLR Institute of Technology and Management
Computer Science Engineering (2020 – 2024)
